## 1. Intro

From a meme token to a huge community with a vision...

Hiroki is a community-driven project which aims to create a new web3 ecosystem, designed by and for our community. It was originally just a meme token with a cool name and branding, but with the support we are getting from the dev team and an in-depth conversation we have had with our community, it evolved into something much bigger. Collecting all of the biggest names in the industry on our way, the HIRO is becoming a big trend in the space, but we aim much higher than that. Our collective goal is to design a new blockchain – HiroChain (HIROC) and a dApp platform (HiroDapps) to unleash the full creative potential of our community and build something meaningful together.

## 2. Key Features

### [HIRO token](#)

HIRO is a new utility token on the Binance Smart Chain network. It was originally designed to allow the community to fund-raise the development of the HiroChain and support the growth of our community's projects (DeFi, NFTs and web3 applications) on the HiroDapps platform. Being the core of the project and the main pillar of the Hiroki ecosystem, eventually the token will be developed into a community-driven governance coin to give a chance to our community members, hodlers and all diamond hands, to have an influence to on the future of this enterprise.

### [HiroChain](#)

The HiroChain (HIROC) is a new home for our community's crypto content. This new blockchain will allow our creators and supporters to store, share, stream and trade any digital experience on the blockchain. Our high-performance network offers security and control over your data and content, with smart contracts and next generation security based on blockchain technology. It is built for the creator's economy and with monetization opportunities in mind, allowing the users to create and sell digital assets (NFTs) minted on our platform and feature useful functions such as; event ticketing, paid content streaming and more.

### [HiroDapps](#)

The development of the new blockchain offers a plethora of opportunities for our most creative and entrepreneurial community members. To be able to create a truly new and fully functioning ecosystem we will search for and vote for the best ideas and creative visions for useful dApps within our community, this way giving a chance to any of you to develop your ideas in real life and build something unique with the support of the team and collected funds. In order to continuously bring value to our holders we will initially focus on the developments that incentivize holding of the token and/or attract new investors to the project.

### 3. Why HIRO?

The crypto space and especially BSC is exploding with new meme tokens and 'community-driven' projects every single day, but how do you recognize the ones that actually have some value in them and a realistic opportunity to become the next Shiba killer? Well, you either look for valid arguments to invest or just FOMO in... and the best thing about Hiroki is that we have both!

Our project went a long way from being just your typical meme token into an ambitious enterprise which it is now. With the support we are getting from the dev team and the community, we have managed to set and achieve a number of milestones in order to reach the collective goal of creating our own blockchain and dapp platform.

#### Security

In order to ensure the safety of your funds and to attract more investors, the liquidity pool for the token is locked and the link to it is pinned in our group chat. The team has also done a full KYC with our strategic partners and plans to hold regular AMAs to answer to any questions and concerns.

#### Marketing

Despite it being a fully community-driven project, the dev team continuously works behind the scenes to help push it forward and ensure successful development of our marketing strategy. So far, they managed to bring on board some of the biggest influencers in the BSC space (1m+ followers combined), secure multiple listings on popular sites and setup plans for a huge social media marketing campaign.

#### Future plans

The dev team has clear and achievable long-term plans for the project. Our goal is to build a new blockchain and an easy-to-use dapp platform to unleash the true creativity of our community. The team consists of experienced devs with successful previous projects and in order to attract bigger investors, the team is being completely transparent about their plans to get there and regularly shares updates with the community.

#### Community

Finally, the community we have established so far is amazing. It is buzzing with positive vibes and makes it easy to just FOMO in when you see how excited everyone is about what we do. We have regular games and competitions for all our members to participate in, and a ton of rewards is being given away every day to honour the most active members and followers.

Join us and WAGMI!

## 4. Tokenomics

HIRO is a utility token on the Binance Smart Chain network with the total supply of 10 billion, and 20% of the tokens burned at launch.

### Marketing Fee

6% of each purchase will be allocated to the marketing wallet. At the current stage, this will be invested in rising token awareness among various channels and community growth, with a goal to transform into a development fund for our community's projects in the future.

### Auto LP

1% of every transaction will be added to token liquidity, guaranteeing reduction in price volatility and increased stability for future transactions.

### Team

1% is used to pay the developer, who we hired to run the back end of the project, and to reward our dedicated team for the management of community channels, games and competitions.

## 5. The Roadmap

### PHASE 1

- v Idea development and Core Team formation
- v Smart Contract testing
- v Planning the marketing strategy
- v Creating community channels (TG, Twitter, Facebook)
- v Securing strategic partnerships

### PHASE 2

- v PancakeSwap listing
- v Website launch
- v Roadmap and whitepaper release
- @ Community games and giveaways
- @ Post launch marketing through crypto influencers, social media accounts etc.
- @ 500+ TG members
- @ 200+ holders
- @ Community voting on dApp ideas
- @ 100k+ marketcap

### PHASE 3

- @ Announcement of key business partners and investors
- @ Partnerships with listing sites; CMC, CoinGecko etc.
- @ More social media marketing to promote the project
- @ 500+ Twitter followers
- @ 3,000+ TG members
- @ 1,000+ holders
- @ Influencer ambassador program
- @ 1m+ market cap

### PHASE 4

- x Roadmap and Whitepaper update
- x 2,000+ Twitter followers
- x 10,000+ TG members
- x 5,000+ holders
- x Development of the HiroChain (HIROC) and the HiroDapps platform
- x 10m+ market cap

### PHASE 5

- x Governance token and DAO proposal
- x 100m+ market cap
